

Bethany school of kindness, tolerance, respect, and teleportation.

I am a pupil at Bethany in 2123.

The start of my day did not go to plan, as my hover bus broke down this morning and we had to walk to school. To be honest, I don't think I have used my legs since gravity boots were invented.

As I stepped through the ancient doors, I looked at the clock on my iPhone 178, and realized that I was twelve minutes late. I was hoping nobody would notice, but a level-bot found me, and I would have to see Mr. Healy in his pod later.

The rest of the day did, however, improve.

I managed to quietly sneak into chapel. The building has not changed at all, Reverend Kendon would be pleased and proud that this has been preserved. I altered my voice box to choirboy setting when singing. I can't imagine having to actually sing in tune.

In History, we learnt about a gentleman called Dyson, who invented the world's first flying bicycle ninety years ago.

Next lesson was food technology. We learnt how to cook boiled seaweed pie. I didn't enjoy the taste, but Mr. Hampton Jr seemed to. The thought of food coming from a plant just makes me nauseous. Luckily, seaweed is the only type of plant left on the planet!

Geography was fun. We were told about our Year 7 school trip to Pluto National Park. I have never been, and I am eager to go (Mum will not be happy about the cost though!)

After morning lessons, I found the 'Food-Cube', and ordered my meal. The meal was dehydrated ham, with a side order of microchips and ketchup. Microchips are half the size of a grain of rice but contain the exact amount of nutrients contained in a historical three course meal.

The first lesson of the afternoon was DT in The Norman Centre. There is an old, dilapidated car in the centre of the room that is being renovated. It is a make of car that was popular called a Tesla.

Following instructions from our teacher-gram, this is a hologram of a world renowned technology inventor of the past. Today it was George Stephenson, other teacher-grams are Isambard Kingdom Brunel, the Wright brothers and John Logie Baird. I created a particle accelerator out of a block of wood and a paperclip, something simple but effective.

In languages we had a lesson on Alienese, this is a complex language spoken through a set of clicks and ticks. I regret doing an Alienese tongue twister on Neptune, as the Neptunian's take it more literally than on Earth.

The day finished with production in the grand theatre that was built in 2023, it's quite old now but was really something in its time.

Finally, I had to see Mr. Healy about my level, yes he is still Headmaster. Cryofreezing was a miracle in 2026 but has meant that Bethany will be led by him for as long as he still enjoys the job.

I do not think too much has changed at Bethany in the last one hundred years, as the values of the school remain the same. I can only imagine the changes that will occur in another century.
